Desdeo packages installation instruction

For running the example files on your system you first need to install the desdeo_emo and desdeo_problem packages using the commands below:

pip uninstall desdeo_emo

pip install desdeo_problem

some suggestions regarding the installation of desdeo_emo and desdeo_problem:

- I could not import some libraries from desdeo_problem in google colab because it uses python 3.7 and they were only compatible with python 3.8. So my suggestion is not to use google colab unless you know a way to overcome this barrier.
- During installing these packages I got an error related to the 'llvmlite' package, this problem was solved using the command below:
  pip install llvmlite==0.37.0rc2 --ignore-installed

If you have any questions or encounter any problems during installing these packages do not hesitate to contact me:
